

# Gerry Wood

Sr. Software Engineer | Mobile Architect

## About me

I have 20+ years of advanced software development experience with firms such as Bank of America, Merrill Lynch, US Trust, Fleet as well as numerous service providers within the financial services sector. I am a Senior Engineer with over 7 years of experience building iOS mobile applications and have led development for major mobile initiatives. My specialty is highly scalable and deeply connected applications for both large and small implementations. I am a proponent of well-crafted code and elegant designs. I believe engineers are artists and their code is a canvas. Code should read like a well written passage.
